

Night walk

Enjoy nature in a very different way, increase the sensations the forest arouses in you and immerse yourself in a new experience as you join us on a nocturnal walk through the trees and among the wildlife.

You will discover how the forests awakens in the night and you will see the life cycles and behaviour of this dark world, like the frogs with their songs and varied colours, the bats with their silent and unpredictable flight, or, in the case of the nocturnal birds, they can see us and we seldom notice them.

The night tour enables you to observe some animals such as Hourglass Treefrog (*Dendropsophus ebraccatus*) Red-eyed Leaf Frog (*Agalychnis callidryas*).

Some species of arboreal mammals such as Four-eyed Opossum, Common Opossum (*Didelphidae*), and with a bit of luck you may see an Agouti (*Agouti paca*), a deer or a small felines.

Duration of the tour 2 hours
